LIVE PORTFOLIO — elijahlittle.com

A production AWS site I architected, built, and deployed myself — serverless visitor counter, interactive AI demo, and write-ups of every project below. The fastest way to see how I work.

PROFESSIONAL SUMMARY

U.S. Army Information Technology Specialist with 5+ years running enterprise IT for a 500-person organization. Day-to-day work spans 280+ endpoints, Active Directory and PKI credential management, Microsoft Intune, Microsoft 365, and networking. CompTIA Security+ certified with hands-on, publicly documented AWS and Kubernetes engineering at elijahlittle.com. Transitioning from active duty in July 2027 and targeting SOC Analyst, Security Engineer, and Security Architect roles.

CORE SKILLS

Cloud & DevOps	AWS (S3, CloudFront, Route 53, Lambda, API Gateway, DynamoDB, IAM) • Docker • Kubernetes • GitOps / Argo CD • CI-CD pipelines • Git & GitHub
Security & Identity	CompTIA Security+ • Incident containment & remediation • Trellix endpoint security • PKI and derived credentials (DoD Purebred agent) • ICAM / access provisioning (DD 2875 SAAR) • Least-privilege access • MFA • Policy-as-code (Kyverno)
Systems & Support	Windows • Linux • Active Directory & Group Policy • SCCM / Configuration Manager • Microsoft Intune (MDM) • Microsoft 365 • ServiceNow (AESMP) incident & asset management • PXE imaging (NIPR / SIPR)
Networking & Dev	TCP/IP • Routing & switching • VSAT / field connectivity • Python • REST APIs • HTML / CSS / JavaScript

PROFESSIONAL EXPERIENCE

U.S. ARMY — Information Technology Specialist (25B)

Nov 2021 – Present

Fort Eustis, Virginia | Camp Humphreys, South Korea | Active Duty

- Provide full-stack IT support **by phone and in person** for approximately **280 computers and 500 personnel** — the internal help desk, systems, and network troubleshooting team for the organization, in a 24/7 environment.
- Contain and remediate **infected and vulnerable endpoints**: isolate machines from the network, reimage, and apply **Trellix** endpoint security policies before returning them to secure, compliant service.
- Serve as a certified **DoD Purebred agent**, provisioning PKI derived credentials to government iPhones enrolled in **Microsoft Intune** (AUDS) so users can sign and encrypt without a smart card.
- Support the Army's **ICAM** program end to end: validate and upload **DD Form 2875 (SAAR)** access authorizations, provision accounts and group membership in **Active Directory** at the approved level of access, and troubleshoot CAC certificate logins and multifactor authentication, enforcing least privilege.
- Image and provision workstations on **NIPRNet** and **SIPRNet**: PXE-deploy the OS, verify MAC authorization for network access control (MAB), place computer objects in the correct **Active Directory OU**, force Group Policy, run **SCCM** client actions, and enforce **Trellix** policies and security updates before handoff.
- Document, triage, and escalate incidents in **ServiceNow (AESMP)**; track hardware assets.
- Support **Microsoft 365** (Outlook, Teams, Word, Excel, PowerPoint, OneDrive) and **Adobe Acrobat**; install printer, network, and peripheral drivers; and explain fixes clearly to non-technical users where downtime is not an option.
- Removed and **physically destroyed** hard drives and SSDs from decommissioned computers per **DoDI 8500.01** and **DoDM 4160.21** media sanitization requirements, protecting sensitive data through end of life.
- Track and enforce **annual Cyber Awareness training** and IT policy compliance for all 500 personnel.
- **Supervise and train** junior IT personnel on troubleshooting, account provisioning, and ticketing procedures.
- Maintain satellite and field connectivity (VSAT) for teams in remote locations.

CLOUD & ENGINEERING PROJECTS

AWS Cloud Portfolio Platform — elijahlittle.com | github.com/FujimotoFC

- Architected and deployed a fully serverless site on AWS: S3 origin secured with CloudFront Origin Access Control, Route 53 DNS, HTTPS end to end.
- Built a live visitor counter using API Gateway → Lambda → DynamoDB and integrated an interactive AI demo.
- Diagnosed and fixed production issues: CORS, 403/AccessDenied, Lambda errors, CloudFront caching.

Internal Developer Platform (IDP) | github.com/FujimotoFC/idp-platform

- Built a self-service platform where a single **git push** deploys a service to Kubernetes.
- Implemented GitOps delivery with Argo CD (auto-sync, self-heal, prune), plus a reusable “golden path” service template so new services start compliant by default.
- Added Kyverno policy-as-code admission control to block non-compliant workloads before they reach the cluster.

EDUCATION & CERTIFICATION

- **University of Maryland Global Campus** — B.S., Cybersecurity Technology (*in progress*) • 47 credits completed
- **Associate of Arts, General Studies – Computer Studies** (*in progress*) • 32 credits completed
- **CompTIA Security+ (SY0-701)**, June 2026 • **IBM Cybersecurity Fundamentals** • **Cisco Networking Academy** labs (Packet Tracer)
